

Short Term Rental Crimping Tools

Dear Sir or Madam,

We should like to inform you about our Short Term Rental service.

What is a Short Term Rental service?

Our short term rental service holds a stock of more than 500 applicators which are updated and if necessary expended according to market requirement.

These tools, which we also call short term rental crimping tools due to the nature of their implementation, may be hired at short notice from us for the processing of crimp contacts.

In which implementation areas are short term rental crimping tools used?

With increasing frequency, quick-change crimping tools are required for a limited period for the production of experimental series, pilot lots for offer submissions, subsequent production of spare parts or simply, the production of small batches.

Frequently, the purchase or long-term rental of a crimping tool which is only required for a few weeks of the year is uneconomical. In such cases, it makes sense to plan the implementation of short term rental crimping tools.

How are short term rental crimping tools ordered?

With regard to the availability of a specific short term rental crimping tool please contact your local Tyco Electronics representative naming the crimping contact to be processed.

If the relevant tool is available send us an order, you will then receive a short term rental contract by fax. As soon as this contract is legally signed and faxed back, processing and dispatch of the appropriate short term rental tool is performed.

What are the terms?

For the terms, please contact your local Tyco Electronics representative.

Unless otherwise agreed, invoicing takes place on a regular basis and will be stopped once the short term rental crimping tool is returned and received by Tyco Electronics in Bensheim.

What are the benefits of using short term rental crimping tools?

You only utilise the short term rental crimping tool in your production for the actual period required to process the relevant order. This reduces the costs that must be calculated for the procurement and stocking of crimping tools.

Processing quality corresponds to that of series production. This provides you with a leading edge over competitors who process pilot series with hand crimping tools.

Short delivery times, easy processing and high productivity are a few concluding arguments that speak for the implementation of short term rental tools under the given preconditions.

If you have any further questions on this subject please contact your local Tyco Electronics representative.

We look forward to hear from you.
