

Advanced Seminar Micrographs

Aim

Training course 4913 "Micrographs advanced seminar" is designed to enable participants to create micrographs with the appropriate equipment and to evaluate them.

Your employees can monitor product quality at each production phase on the basis of micrographs.

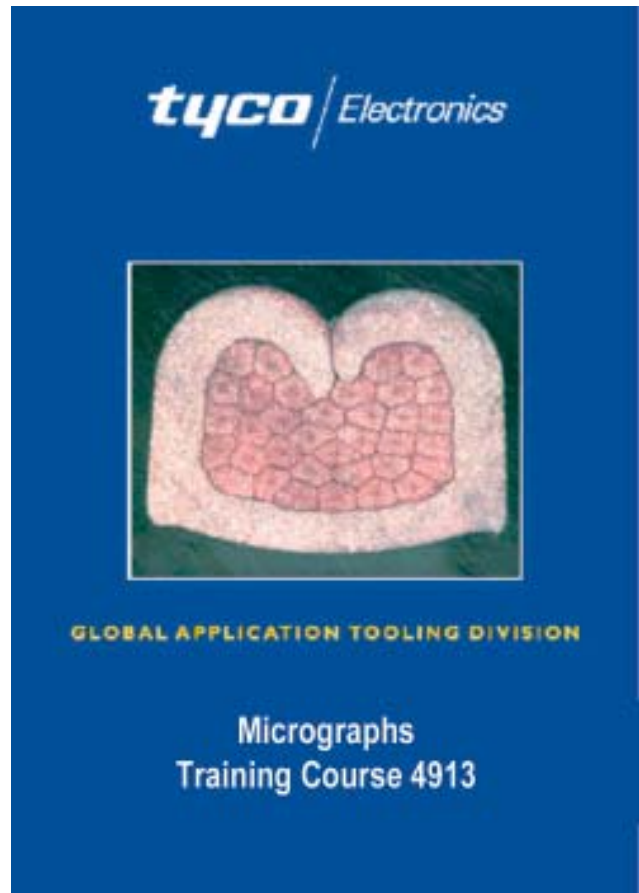

Early error detection may considerably reduce product and reworking costs.

This training course is aimed at all employees in the quality assurance, work preparation and maintenance sectors.

Training Course

Subject Matter

- Introduction to micrograph surveys
- When are micrograph surveys necessary
- What may be documented by a micrograph
- How are micrographs created
- What equipment is required to create a micrograph
- Micrograph laboratory components
- Evaluation of samples using microscope, digital camera and computer
- What do crimp connection micrographs tell us
- Documents and specifications

This training course is held in our training centre in Bensheim or on request, also on-site in your company.
