When Needs Change... The Tooling Doesn't Have To.

Crimp dies can be a significant investment, so you shouldn't have to buy new ones when your crimping requirements change. There can be lots of reasons it could happen. You might be moving up from prototyping and R&D to production. You might need to do the crimping on the factory floor or in the field, in tight spaces or customer sites where a faster crimp means a return to production.

These are all good reasons, and Tyco Electronics has responded with the SDE Standard Die Envelope system of interchangeable crimp dies. Start with a hand-operated tool. Then move up to a powered portable option or even a benchtop terminator. **You can move the dies you have from one tool to another, with only a screwdriver needed to make the change.**

It's a long-term solution that lets your dies move with your application, as your volume demands grow.

The same Tyco Electronic quality you expect. The crimp performance you and your customers need. **Our commitment. Your advantage.**
